

## ANALYTICS TO ACCELERATE MISSION IMPACT

Booz Allen is here to help our clients harness emerging data and capabilities for their most dynamic missions. Modelpoint, our massively scalable data science and analytics platform, enables us to provide automated exploitation, data-driven reporting, and multi-cloud Analytics-as-a-Service. Leveraging thousands of commercial and publicly available sources, Modelpoint uses a layered analytics approach to empower decision making, with intelligence products and services delivered directly into client systems.

**OUR APPROACH**

Booz Allen's Modelpoint enables greater partnership between government and industry, setting a new precedent for Data/Analytics-as-a-Service and cross-domain operations.

**• Secure and Interoperable**

- Modelpoint operates through an open application programming interface (API) multi-cloud architecture for maximum integration with industry teammates and government tools and databases—all protected by industry-leading, zero trust cybersecurity protocols and virtual private networks.

**• Massively Scalable**

- Our solutions are designed to integrate multi-cloud analytics, distributed storage and processing, and available graphics processing unit (GPU) caching and computation.

**• Layered Analytics**

- We orchestrate collection and automated exploitation of diverse data through dynamic model stacks that include computer vision, spatial statistics, graph, and other advanced algorithms with machine learning and emerging techniques.

**• Cross-Domain**

- Our architecture enables integration of unclassified and classified sources for national security missions.

## MODELPOINT INDUSTRY PARTNERS RECEIVE

- Flexible API gateways to integrate proprietary data and analytic pipelines
- Streamlined architectural and engineering support
- Rapid integration with Booz Allen intelligence products and services

## MODELPOINT GOVERNMENT CLIENTS RECEIVE

- Exponentially increased capability for processing cross-domain, multimodal, big datasets
- Resource savings based on automation and integration of commercial data and capabilities
- Faster impact of data on strategic decisions and mission operations

## WHAT SETS US APART

Booz Allen is focused on innovation and integration of new data and services for human and global security, not software sales or licensing agreements.

Modelpoint enables us to offer the most impactful, industry-driven, analytic solutions available—delivering products and services that maximize mission value.

- **Non-proprietary products and services:** All outputs of the Modelpoint platform become the property of the client for which they were produced and can be shared freely with that client. Many services can be delivered via API on either low- or high-side networks and directly into existing government systems.
- **Embracing the modeling ecosystem:** Modelpoint is not meant to replace existing government tools, but rather accelerate and complement them.
- **Flexible contracting options:** We don't take a one-size-fits-all approach to our modeling and automation. Modelpoint data and analytic services are available as standalone off-site work orders or as a complement to existing staffing solutions.

## About Booz Allen

For more than 100 years, military, government, and business leaders have turned to Booz Allen Hamilton to solve their most complex problems. As a consulting firm with experts in analytics, digital solutions, engineering, and cyber, we help organizations transform. To learn more, visit [BoozAllen.com](https://BoozAllen.com).
